

FS Seeder

FS Seeder

Pneumatic seeder for
intermediate crops

Kongsilde FS Seeder

for Delta Flex and Vibro Flex 7400

Seeding machine for intermediate crops

A correct established intermediate crop has a number of advantages like:

- Maximum collection of nitrogen from the root zone
- Structural effect of the soil layers as the dead roots leaves vertical channels for water, oxygen and nutrients
- A correct established crop prevents weeds from developing due to lack of sunlight
- Fulfills the rules of establishing the crops

Seeding in combination with a stubble cultivator has the following advantages:

- Field residues are mixed into the top layer and mixed with residues
- A seedbed is created by the cultivator with loose soil for the small seeds
- The rear roller makes a reconsolidation which improves the germination

Specification Kongsilde FS Seeder:

- 120/200/300 liter hopper capacity
- Pneumatic distribution of seeds
- Fully electric driven feeding system
- Fixed or speed related feeding rate
- Control box for the tractor cabin (3.2 / 5.2)
- 8 outlets (50 – 75 cm distance on 4 – 6 m cultivators)
- Adjustable spreader plates for broadcasting the seeds
- Electric/hydraulic driven fan
- Easy and safe access to the hopper from the loading platform

	Type	Fan	For fully mounted DF / VF 7400	For trailed DF / VF 7400	Hopper contents	Outlets	Speed related feed rate
FS Seeder	PS 120 – 3.2 El	Electric	X		120 liters	8	No
FS Seeder	PS 200 – 3.2 El	Electric		X	200 liters	8	No
FS Seeder	PS 200 – 3.2 Hy	Hydraulic		X	200 liters	8	No
FS Seeder	PS 300 – 5.2 El	Electric		X	300 liters	8	Yes
FS Seeder	PS 300 – 5.2 Hy	Hydraulic		X	300 liters	8	Yes
