**OPERATOR'S MANUAL  
1300 TWIN FRAME  
DUAL PLACEMENT TOOLBAR**

COME VISIT US ON THE WEB AT: [www.progressivefarm.com](http://www.progressivefarm.com)

## **Introduction**

The purpose of this manual is to assist in the assembly, operation, and maintenance of your Model 1300 Toolbar. The extra care given by the operator will compliment the efficient and economical use of this machine for years to come.

During the assembly process, it will be necessary to attach various components together using pins and shaft of various sizes. Please take the extra time required to remove excess paint from the pins and shafts as well as the bushing bores that they will be placed through. Anti-seize or an equivalent product should be applied to all non-greasable joints and pins. The time and effort spent now will be well rewarded in time savings in the future.

Follow the assembly sequence provided in the illustrations and part descriptions. Before you begin assembly, read this manual and become acquainted with the various components of this implement.

Thank You.

# **SAFETY FIRST!**

## **FOLLOW THESE RULES:**

Comply with your state and local laws governing highway safety while moving machinery on the highway.

The SMV reflector emblem should be used at all times on public roads, and always use the flashing warning lights on your tractor.

Drive at a reasonable speed to maintain complete control of your machine at all times. Do not exceed 20 MPH (32.2 km/h) while transporting. Avoid heavily traveled roads whenever possible.

Hydraulic fluid escaping under pressure can have enough force to penetrate your skin. If you are injured by escaping fluid, see a doctor at once. Serious infection or reaction can result if medical treatment is not given immediately. Make sure all connections are tight and that hoses and lines are in good condition before applying pressure to the system. Relieve all pressure before disconnecting any lines or performing other work on the hydraulic system. To find a leak under pressure, use a small piece of cardboard or wood, **NEVER** use your hands.

At least once a year, inspect all hydraulic hoses for leaks, cracks, abrasions, and pinched areas. Tighten fittings or replace hoses as needed.

Always be sure the hydraulic lines and cylinders are free of air and do not leak. After connecting any new parts, replacing old parts, or servicing the hydraulic components, carefully cycle the hydraulic cylinders several times to purge trapped air from the system. Check all the connections for any leakage.

Always block up raised equipment when servicing it. **NEVER** rely on the hydraulic system to support the implement during servicing.

# SAFETY FIRST!

## FOLLOW THESE RULES:

Keep all safety equipment, such as hitch pins, chains, SMV emblems, lights, reflectors, etc... in good repair. Please note all safety decals, and keep them in place. New decals are available from your dealer.

Misuse, abuse, neglect, or modification of this machine can cause:

- mechanical breakdown
- property damage
- personal injury or death

Always use proper safety precautions and common sense. Set a good example and show your workers how to work safely, be an example, not a statistic.

## Recommended Tire Pressures

Tire Size & Ply	Pressure
13.6 x 38 - 12 ply	44 PSI
12.5L x 15 - 12 ply	50 PSI
12.5L x 15 - 8 ply	36 PSI
16.5 x 16.1 - 10 ply	36 PSI
18.4 x 26 - 10 ply	26 PSI
5:30 x 12 - 6 ply	55 PSI
18 x 8:50 x 8 - 4 ply	22 PSI
4:80 x 8 - 4 ply	42 PSI

## **BOLT TORQUE**

- 1.** Improperly tightened bolts will result in damage, breakage, expense, and lost time.
- 2.** Always replace bolts with the specified grade and type.
- 3.** Torque all fasteners to the proper value during assembly, then check after every two (2) hours of operation until they remain tight.
- 4.** Use the following torque chart as a guide to insure proper tightening of the fasteners.
- 5.** Make a daily inspection of the implement checking for loose bolts as well as leaking hoses.

BOLT Ø - TPI	GRADE 2	GRADE 5	A - 325	GRADE 8
3/8 - 16	25	35	50	50
7/16 - 14	35	55	80	80
1/2 - 13	55	85	125	125
9/16 - 12	75	125	175	175
5/8 - 11	105	170	235	235
3/4 - 10	185	305	425	425
7/8 - 9	170	445	690	690
1 - 8	260	670	1030	1030
1-1/8 - 7	365	900	1460	1460
1-1/4 - 7	515	1275	2060	2060
1-3/8 - 6	675	1675	2700	2700
1-1/2 - 6	900	2150	3500	3500

TORQUE VALUES ARE IN FT./LBS. AND ARE BASED ON PLATED OR GREASE COATED HARDWARE. INCREASE VALUES 5 - 10% FOR FINE THREADS. USE 65% OF THE LISTED VALUE FOR JAM NUTS.

# Assembly Instructions

## 1300 Anhydrous Toolbar w/Liquid Tank

Be sure to remove excess paint from pins and bushing bores. Apply a thin coat of grease to pins before installing them. Use "Anti-seize" or equivalent on all non-greasable joints and pins. Never strike a pin directly with a hammer – always use a block to absorb the shock if a pin does not easily fit. Striking a pin directly will cause the end of the pin to spread.

Be sure to lubricate all grease zerks. Refer to the lubrication drawing for all zerk locations and time intervals for greasing.

### Mainframe, Wing, and Hitch Assembly

1. Lay the hitch on the ground, placing the mainframe on top of it.
2. Center the mainframe on the hitch and attach the two together using the hardware from bag #102001.
3. Lay the wings out beside the mainframe and attach the wings to the mainframe using the pins and hardware included in the wing hinge (make sure the paint is removed and pins are greased prior to installation).

### Mainframe/Wing Wheel Assembly

1. Lift the toolbar into the air from the rear center of the mainframe.
2. Place the wheel arms in their approximate locations (refer to the correct shank spacing drawings for the exact wheel placement).
3. Find the "Pump Mount" and mount it to the left (looking from behind) mainframe lower saddle clamp. Attach the other three wheel saddle clamps to the other lower saddle clamps using hardware from one of the following bags: Single mainframe/Single wings – 102078, Tandem/Single – 102079, Tandem/Tandem – 102080.
4. Attach the wheel arms to the clamp assembly using pins and hardware included on the lower clamp assembly.
5. Attach the 3-1/2" x 10" rephase cylinders to the wheel arms. Install tire/wheel assemblies and transport locks. **Note: Make sure lug bolts are tightened prior to transporting of unit.**
6. Lower the mainframe, letting the toolbar rest on the mainframe wheels. Raise one of the wings and repeat the steps 1-5 listed above only using 3-1/4" x 10" rephase cylinders on the wings.
7. Repeat process for opposite wing.
8. After both wing wheels are installed, lift mainframe back into the air, relieving pressure on the cylinders. Remove the safety locks and lower the bar.

### Attaching the Wing Fold Cylinders

1. Locate the 4" x 24" hydraulic cylinders. Using hardware from the cylinders and hardware bag #213001, attach the cylinders to the mainframe, leaving the clevis end unattached.
2. Be sure to attach the butt end of the cylinder to the mainframe.

### Hydraulic Hose Installation

1. Refer to the "Hydraulic Schematic Drawings". Lay out the hydraulic hoses from hose packages #212001 (Wingfold) and #212051 (Wheel Mount) in their approximate locations.
2. Using hardware from bag #213001 (Wingfold) and #213051 (Wheel Mount) to attach the hoses to the divider/combiner valve and respective cylinders.
3. Attach the hoses to the bolts welded on the right hitch tube using hose holdowns. **Do not tie hoses down at this point.**
4. Hook up the toolbar to a hydraulic unit and charge all cylinders with oil to purge the air from the cylinders. Attach the clevis ends of the cylinders to the toolbar.

### Liquid Tank/Saddle, Ground Drive/Pump Installation

1. Set the tank saddle on the mainframe of the toolbar with the sump hole on the left side (Looking from behind bar) of the toolbar. Attach the saddle to the frame with hardware from bag #102226.
2. Set the tank in the saddle (making sure the tank sump is in the sump hole) and attach to the saddle with tank straps and hardware from bag #102226.
3. Using hardware from bag #213190 install the 2" quick-fill per the "Quick-fill Plumbing Schematic".
4. Attach the Pump Mounting Arm to the Pump Drive Saddle Clamp using the 1-1/2" x 8" hinge pin provided in the saddle clamp.
5. Using hardware from bag #102444 attach the pump to the pump arm and the drive wheel assembly to the pump arm. **Note: Before mounting the pump to the pump arm, the upper most plug must be replaced with a vented plug and the square head drain plug (bottom of pump) must be replaced with the allen head drain plug. Both plugs are provided.**
6. Plumb the pump with hardware provided in bag #213189.

### Coulter and Shank Assembly

1. Lower the toolbar to a good working height.
2. Select the proper exploded view drawings (Rigid Shank or Auto Reset Shank). Use hardware from bag #102027 for rigid shank or #102028 for auto reset for assembly and installation of shank mounts.

3. On rigid shank mounts, be sure to leave one inch of threads below the lock nut of the spring loaded T-Rod and a distance of 1-1/2" between the bottom of the "T" and the 3/4" nut.
4. On auto reset shanks, be sure to leave 1/2" of threads below the lock nut of the spring loaded T-Rod and a distance of 1-7/8" – 2" between the bottom of the "T" and the 3/4" nut. The spring should be compressed to approximately 9-1/2" to 9-3/4". **Note: These measurements are approximate. Field conditions may cause the need for further adjustments.**
5. Refer to the coulter spacing drawings in the back of the book for correct locations/placement of shank mounts.
6. Note there are left and right shank assemblies. When placing an assembly, notice that the shank will line up with either the left or right u-bolt.

### **Anhydrous Rear Hitch Assembly**

1. Place the rear hitch behind the toolbar, centering it on the mainframe. Using the hardware from bag #102030 (Rigid Rear Hitch) or #102035 (Floating Rear Hitch) to attach to the toolbar.

### **NH3 Bracket and Gauge Assembly**

1. Attach the bracket, swing arm, and gauge stand as shown using hardware from bag #102178 (3/8" NH3 Kit 27-1/2' – 32-1/2'), 102179 (1/2" NH3 Kit 27-1/2' – 32-1/2'), 102180 (3/8" NH3 Kit 35'), or 102181 (1/2" NH3 Kit 35').
2. Attach all hoses and fittings as shown in the schematic.
3. It may be necessary to plug some of the outlets on the manifolds. It is strongly recommended to space these evenly around the manifold.
4. Tie down the hydraulic and NH3 hoses with tie straps (not provided) to keep them from being pinched in the hinge points.

### **Safety Light Assembly**

1. Using the hardware from bag #102032, attach the lights on the rear tube of the wings as shown making sure the red and yellow lights are visible from the rear of the bar.

AUTOMATIC SEQUENCE VALVE OPERATION

CAUTION: TAKE CARE WHEN TURNING THE ADJUSTMENT SCREWS OUT THAT YOU DO NOT CUT THE O-RING SEAL BY BACKING THE SCREW OUT TOO FAR.

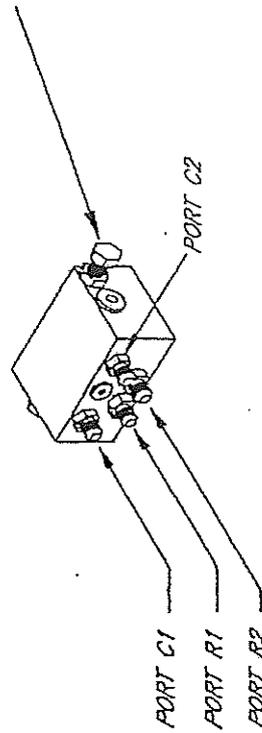

THE AUTOMATIC SEQUENCE VALVE ALLOWS THE ALTERNATE OPERATION OF THE RIGHT AND LEFT MARKERS EACH TIME THE MARKERS ARE "CYCLED". THE OPPOSITE MARKER WILL BE ACTIVATED.

THE RAISE RATE ADJUSTING VALVE ALLOWS THE OPERATOR TO INCREASE OR DECREASE THE SPEED THAT THE MARKER RAISES. ADJUSTING THE VALVE IN (CLOCKWISE ROTATION) WILL DECREASE THE SPEED OF OPERATION WHILE TURNING THE ADJUSTING SCREW OUT (COUNTERCLOCKWISE) WILL INCREASE THE SPEED. TO ADJUST THE RATE, FIRST LOOSEN THE JAM NUT ON THE SCREW THEN ADJUST THE SCREW IN OR OUT. BE SURE TO RETIGHTEN THE JAM NUT SECURELY AFTER MAKING ANY ADJUSTMENTS.

THE PORTS DESIGNATED 1 AND 2 ON THE VALVE BLOCK SHOULD POINT FORWARD AND WILL BE ATTACHED TO THE HOSES THAT GO TO THE TRACTOR.

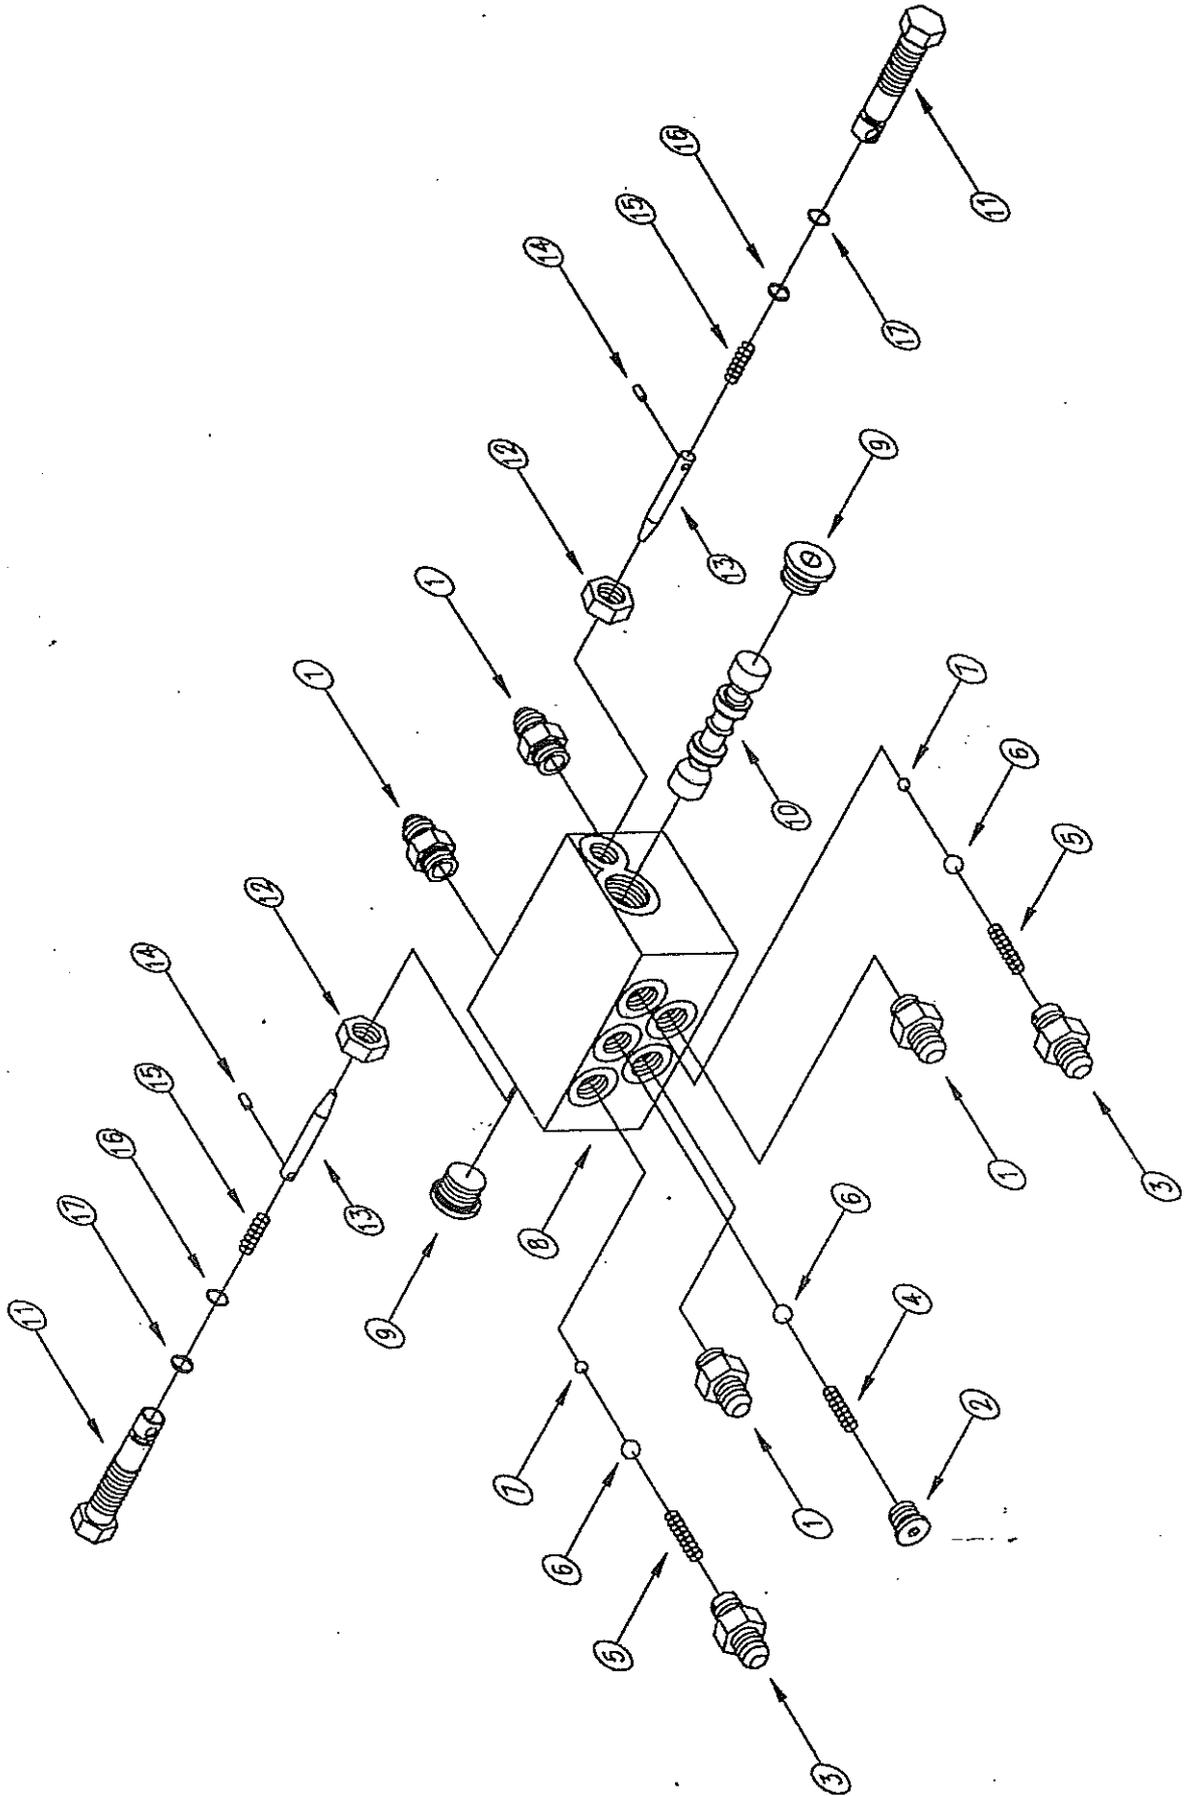

THE LOWER RATE ADJUSTING VALVE ALLOWS THE OPERATOR TO INCREASE OR DECREASE THE SPEED THAT THE MARKER LOWERS. ADJUSTING THE VALVE IN (CLOCKWISE ROTATION) WILL DECREASE THE SPEED OF OPERATION WHILE TURNING THE ADJUSTING SCREW OUT (COUNTERCLOCKWISE) WILL INCREASE THE SPEED. TO ADJUST THE RATE, FIRST LOOSEN THE JAM NUT ON THE SCREW THEN ADJUST THE SCREW IN OR OUT. BE SURE TO RETIGHTEN THE JAM NUT SECURELY AFTER MAKING ANY ADJUSTMENTS.

TO OPERATE WITH BOTH MARKERS DOWN:

LET ONE MARKER DOWN INTO THE OPERATING POSITION. "BUMP" THE HYDRAULIC LEVER IN THE DIRECTION THAT WOULD RAISE THE MARKER, BUT DO NOT RAISE THE MARKER. THIS "BUMPING" WILL CAUSE AN INTERNAL SPOOL IN THE VALVE TO SHIFT AND ALLOW OIL TO FLOW TO THE OPPOSITE MARKER CYLINDER. THEN MOVE THE HYDRAULIC LEVER IN THE DIRECTION THAT WILL LOWER THE OTHER MARKER.

## WARRANTY

**Main Frame, Wings, Wheel Supports ..... Three (3) Years**  
**All Other Components, except tires ..... One (1) Year**

Progressive Farm Products Inc. (PFP, Inc.) warrants each new PFP, Inc. product to be free from defects in material and workmanship. This warranty is in effect from the date of delivery to the original purchaser and is applicable only for the normal life expectancy of the machine or components, not to exceed the time periods listed above. Tires on PFP, Inc. equipment are warranted through the respective tire manufacturer. Contact a dealer of the manufacturer in your local area.

Under no circumstances will it cover any merchandise or components thereof which, in the opinion of the company, has been subjected to negligent handling, misuse, alternation, an accident, or if repairs have been made with parts other than those obtainable through PFP, Inc.

Our obligation under this warranty shall be limited to repairing or replacing, free of charge to the original purchaser any part that in our judgement shall show evidence of such defect, provided further that such part shall be returned within thirty (30) days from date of failure to PFP, Inc. through a dealer from whom the purchase was made, transportation charges prepaid.

This warranty shall not be interpreted to render us liable for injury or damages of any kind of nature, direct, consequential, or contingent to person or property. This warranty does not extend to loss of crops, loss because of delay or any expense of loss incurred for labor, supplies, substitute machinery, rental, or for any other reason.

There are no warranties, either expressed or implied, of merchantability of fitness for particular purpose intended or fitness for any other reason.

This warranty is subject to any existing conditions of supply, which may directly affect our ability to obtain materials or manufacture replacement parts.

PFP, Inc. reserves the right to make improvements in design or changes in specifications at any time without incurring any obligations to owners of units previously sold.

No one is authorized to alter, modify, or enlarge this warranty nor the exclusions, limitations, and reservations.

**Progressive Farm Products Warranty does not include  
cost of travel time, mileage, hauling, or labor.**
