Introduction

This booklet contains recommended layout patterns for 4" and 6" tine spacing and correlating harrow layouts for each different single fold cultivator width.

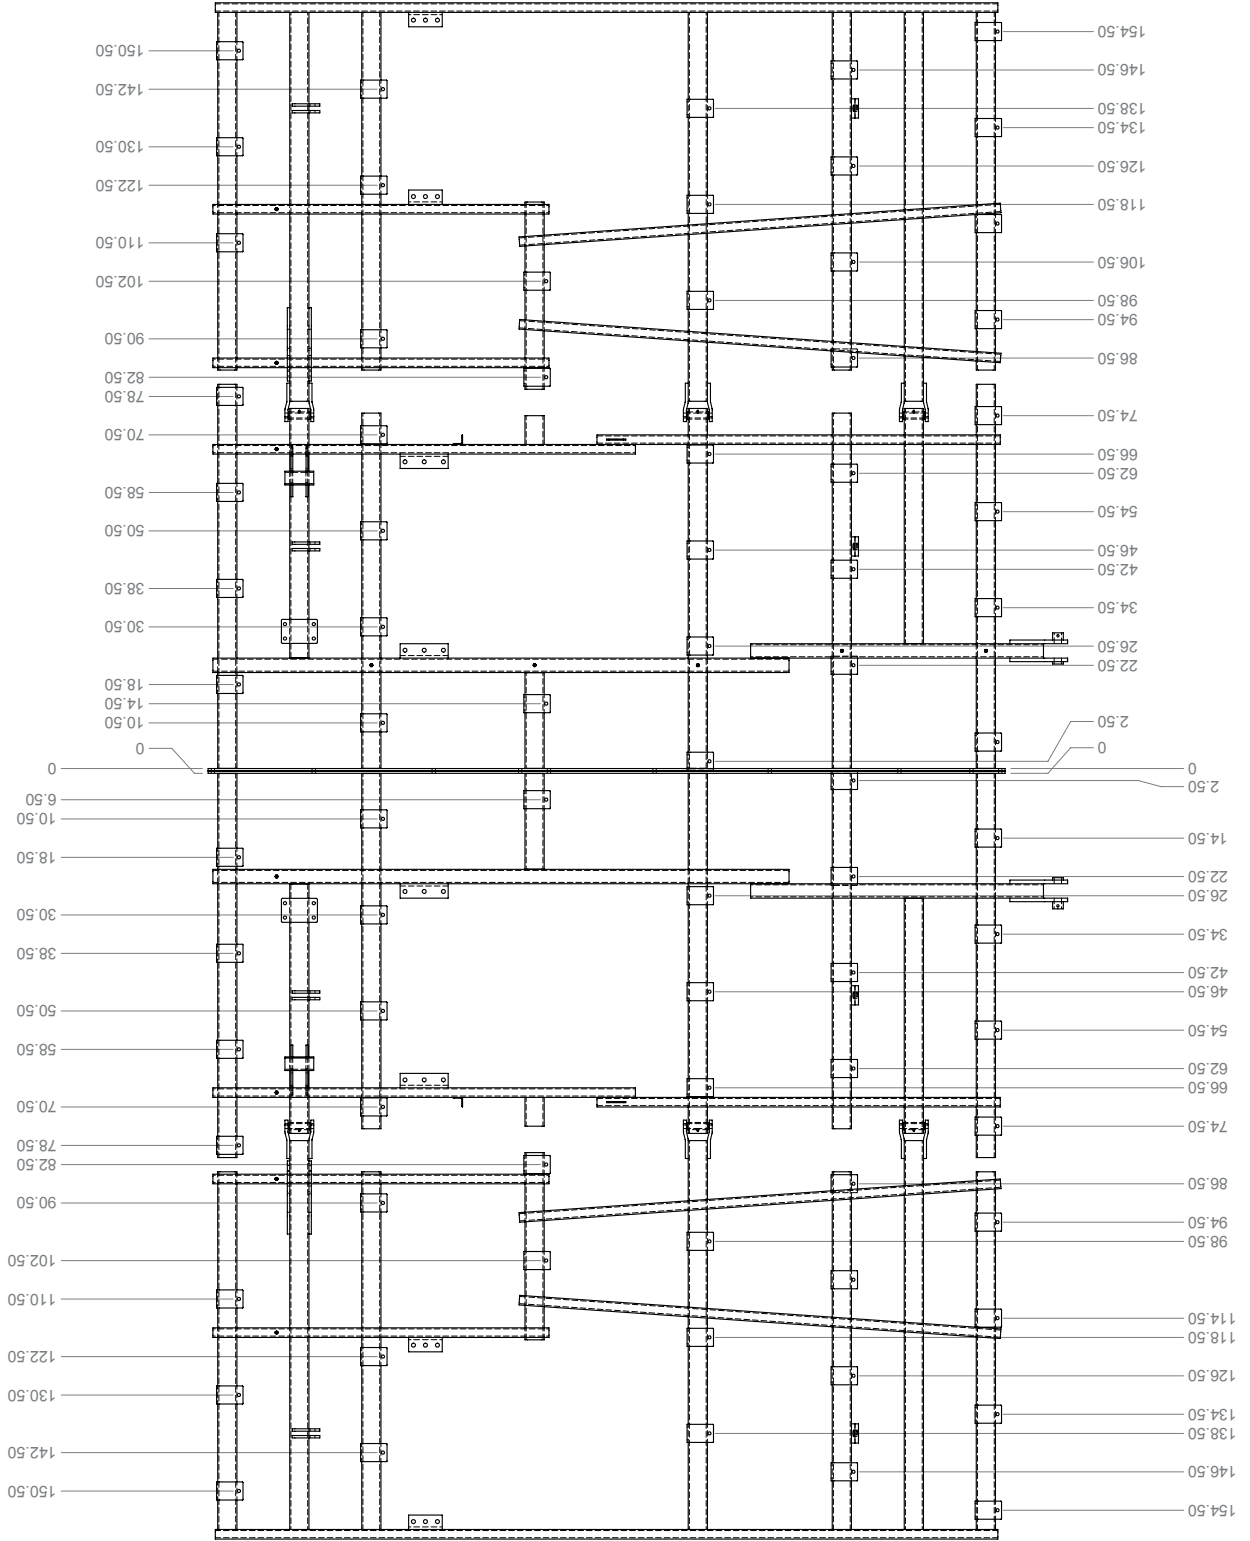

All dimensions in the booklet are referenced from the center frame connection rails. Measuring tape should be hooked onto right side of connection rails for left side dimensions and left side of connection rails for right side dimensions. See reference image below.

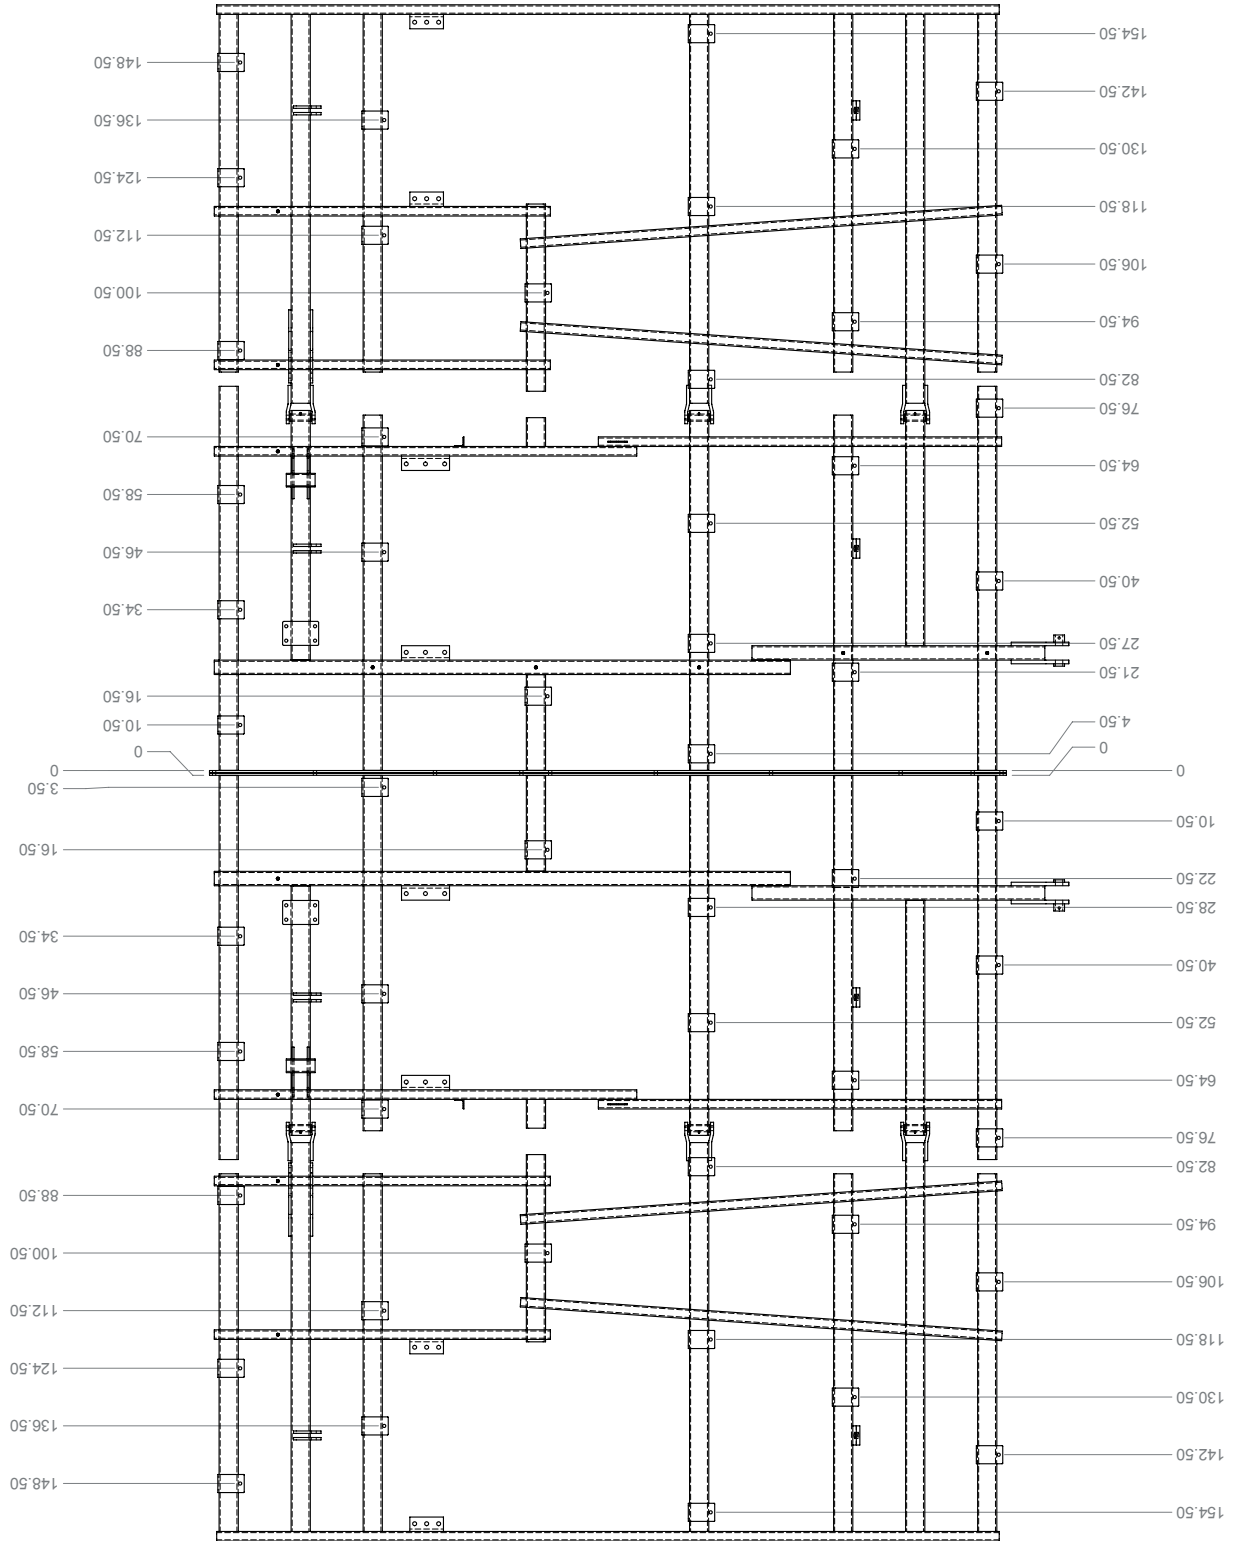

NOTE FOR DRAG HARROW LAYOUTS: Drag harrows come pre-assembled in the steep angle setting. If preference is to use shallow angle setting as described in harrow manual, left and right side dimensions in this booklet for harrow arms need to be switched.

NOTE FOR COIL TINE HARROW LAYOUTS: Number inside circle/square balloon indicates first mounting hole from end of each bar. "T" number indicates tine bar size, and number after "-" indicates number of offset holes on end of the bar. For example "3T" would be a bar with 3 coil tines and "3T-1" would be a bar with 3 coil tines that has one extra hole on each end.
